

ANDREW BALINGIT

Cerritos, CA | (650) 892-9069 | abalingit@gmail.com | [linkedin.com/in/abalingit/](https://www.linkedin.com/in/abalingit/)

PROFESSIONAL SUMMARY

Senior infrastructure and collaboration engineer with 15+ years at Netflix and Google. I manage and support the core collaboration systems people work in every day — Google Workspace, Slack, ServiceNow, Jira. Supported a 2,000+ user migration with zero downtime, built early telemetry dashboards that replaced guesswork with data, and held external vendors and MSPs to enterprise SLAs. Lately I've been applying that operational experience to internal AI tooling: local models, prompt engineering, and MCP-based agent workflows.

TECHNICAL SKILLS

- **SaaS:** Google Workspace (Admin Console, GAM), Slack Enterprise Grid, ServiceNow (ITSM/ITIL), Jira & Confluence, Zoom
- **Automation & Integration:** Python, Bash, REST APIs, webhooks, JSON, Git, n8n, Zapier
- **Infrastructure & Security:** Linux (Debian/Ubuntu), Docker, Unraid, DNS/DHCP/TCP/IP, VLAN segmentation, endpoint security, zero-trust concepts
- **Analysis & Delivery:** Requirements gathering, process mapping, architecture specs, change management, vendor SLA management, telemetry & metrics
- **Applied AI:** Claude (prompting, tool-calling), Model Context Protocol (MCP), Ollama / local model deployment, AI-assisted internal tooling

PROFESSIONAL EXPERIENCE

NETFLIX INC. | Los Angeles, CA

Senior AV Infrastructure Engineer, Operations | January 2020 – Present

- **Collaboration & Fleet Architecture:** Own the meeting room and collaboration stack — Google Workspace tenant policy, OU structure, least-privilege access, device and software lifecycles — across 3000+ rooms in 30+ locations.
- **Telemetry & Dashboards:** Built the initial endpoint health and latency monitoring dashboard for the team, establishing the baseline framework that colleagues expanded into a fleet-wide telemetry system.
- **Vendor Accountability & SLAs:** Assisted with technical vendor evaluations for multi-site integration projects and held external integrators and MSPs to strict enterprise SLAs and performance standards.
- **Engineering Documentation & Standards:** Wrote the documentation no one else had time to write: architecture specs, SOPs, process flows, and end-user guides that serve as the standard reference

for distributed teams.

- **Executive Technical Partnership:** Trusted technical partner to C-level leadership: translate complex architectures into plain language and keep company-wide all-hands and high-profile events working.

Senior IT Support Engineer | December 2012 – January 2020

- **Enterprise Cloud Migration:** Helped the migration from on-premise Exchange to Google Workspace and the global fleet move to Windows 10: 2,000+ users, zero operational downtime, including requirements gathering, pilots, and user enablement.
- **ITSM & Service Delivery Optimization:** Ran incident queues, service requests, and problem management in ServiceNow and Jira using ITIL. Recurring issues got permanent system-level fixes, not re-triage.
- **Global Systems Modernization:** Rolled out cloud-managed print services internationally and decommissioned legacy on-premise print servers, cutting 10 on-prem servers.
- **Security Task Force:** Served on the corporate Anti-Malware Task Force, partnering with cross-functional IT and security teams on endpoint protection initiatives.

GOOGLE, INC. | Mountain View, CA & Seattle, WA

Internal Technology Resident | August 2010 – February 2012

- **Technical Consultation & Tier-3 Support:** Provided Tier-2/3 diagnosis and TechStop walk-up consultation for engineering and business teams on macOS, Linux, and web applications.
- **Virtualization & Deployment Testing:** Built and maintained multi-node VMware ESXi test environments to validate software packages, scripts, and OS images before production rollout.
- **Technical Training & Onboarding:** Designed and taught internal training — including "macOS Fundamentals" — that got technical and non-technical staff productive faster.

LAKIN TIRE WEST, INC. | Santa Fe Springs, CA

IT Support Administrator | February 2012 – December 2012

- **Infrastructure & Systems Modernization:** Worked with the IT Director to plan and execute the Exchange 2003 → 2010 upgrade and stand up core IT for new regional logistics facilities.

APPLIED AI (HANDS-ON)

- **Local Model Serving & Evals:** Run local LLMs on a home GPU server with Ollama (DeepSeek, Qwen, Gemma quantized builds) and evaluate them for tool-calling before putting them to work.
- **Agentic Workflows & Tool-Calling:** Built MCP integrations that give local models access to internal services and tooling; experimenting with agent-based automation for real workflows.
- **Voice & Workflow Automation:** Wire up voice → transcription → notes pipelines using local Whisper and n8n, and manage the whole stack (Docker, Unraid, networking) directly.

EDUCATION

San Jose State University | San Jose, CA

Bachelor of Arts, Psychology | Minor in Public Relations

Focus: Organizational Communication, User Adoption, Change Management

CERTIFICATIONS

- **Certified Technology Specialist (CTS)** – AVIXA
